# Disassembling PineBook Pro Docking Deck (due to disappeared microSD Card)

Please remark:

The microSD Card fully inserted protrudes approx. 5mm from the housing.

The golden contacts of the microSD Card are on top (same side as the grey rubber strips)

⭕ M3   ⭕ Hidden original screws

To break open the housing, I drilled two M3 threads and then "gently" tore them open with inserted screws on a vice.
After opening, 2 small screws were visible, which were hidden under the black cover.
=> Remove the black cover (just under 1mm thick) and loosen the screws to open the housing.

How it looks on the side of the cable is not known to me.
